Subject: Elastometric Paint Testimonial

Hello Frank,

I'll bet you thought I had forgotten this issue. Here is a testimonial that you can use on your web site. Please do not include my phone number or e-mail address.

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX>

Frank, this is a short note to you to tell you how great the Ultra Satin elastometric paint is. As you know, your company, Jackpot Painting, painted our entire complex of condominium buildings (I believe that we have some 55 buildings) and some of our single family homes. We live in a condominium building and, shortly after you completed your painting contract, a family of pigeons moved into a condo building just in front of ours. The nesting pigeons began building a nest in the eaves of this building and their droppings began staining the side of the newly painted building. The mess got so big that it was about 8 inches wide and ran all the way down the side of the building from the second story to the ground, some 20 feet I would guess.

I waited for several weeks to see if our property manager would take action to have the building pressure washed and, when they didn't I took my own action. I was a little apprehensive trying to clean the stains off the building with anything but water initially. I got my ladder, a hose, and tried to blast the stains off. This failed so I then got a spray bottle of Simple Green, full strength, and sprayed the stain from top to bottom. After waiting for 15 minutes I then flushed the stain with my hose and, remarkably, all of the stain washed away. My next concern was that, after the building dried, perhaps the paint would appear to be bleached out and a different color than before. After drying I was amazed to see that the paint looked fine and was none the worse for wear.

Several months ago I had occasion to one again try to clean stains off the paint, this time on our building. Several birds had eaten some berries and, then perched on a lower section of our roof near our front door and their droppings stained the paint. I repeated the same process with the Simple Green and had the same excellent results.

Bird droppings are very caustic/acidic and I was amazed at the performance of the elastometric paint. I would highly recommend this product to anyone repainting their home.

Best regards,

Thomas B. Mock
